CHALLENGE

Desimone's job is complex in many ways. Each project is unique and requires substantial investment. Solution architecture, technical drawing, creation of the machine, testing, fine tuning and installation at the customer. All within a fixed budget for the client. Project coordinators have an important responsibility in monitoring their budget. The current management system no longer meets the expectations of project managers and no longer meets current technical standards.

SOLUTION

The solution mainly concerns the financial monitoring of projects. At any time, the project manager has a dashboard with the status of his project. The budget, the amount committed (purchase orders) and the consumption. The time worked by the workers on the project tasks, the hours of engineering, the materials used and the purchases specific to the project are recorded in real time.

To achieve its digital transformation, Desimone chose the Odoo applications and Eezee integrator for its expertise in project management.

RESULTS

The new system was put in place in less than 5 months with the billing, project monitoring, purchasing and inventory management processes.

Thanks to a barcode tracking system, workers record their working times per task in real time. Odoo's document management also allows you to gather all the project documentation directly in the ERP.

The implementation of Odoo is a great leap forward for Desimone. I thank the Eezee team for their flexibility and the quality of the relationship.
